

BytePad is a low code no code cloud platform that aims to simplify the process of archiving legacy applications by reducing the amount of manual migration and mapping.

BytePad provides streamlined access to legacy charts within Epic, pulling from all archived applications. It's strategically crafted to store clinical, accounting, and ERP data, in addition to documents and images. BytePad is purpose-built to enhance the efficiency of continuity of care and ROI workflows while also reducing licensing and maintenance expenses.

BytePad is integrated with EHRs such as Epic and provides several connectors and pre-built templates to address various use cases.

A turn-key solution to support the digital journey.

### Use BytePad for:

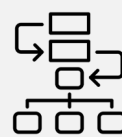

- Application Rationalization
- Inventory Control
- Data Archival Strategy
- Data Reporting & Analytics
- Change Control
- Incident Management
- Asset Management

**Accelerates transition from traditional methods**

**Flexible to accommodate the demands of various departments in Health System and Government**

**Allows strengthened customer service**

**Strong user, groups and role-based security**

**Empowers your employees to be innovative**

**Agility, improved collaboration, increased productivity and faster development**

**Pre-built templates for data management and other use cases**

**Turn-key solution to address various IT and business used cases**

# Why use BytePad?

## CLOUD HOSTED

Cloud hosting increases the speed of application deployment and delivers customer demands quickly. It also reduces deployment costs.

## MODULE-DRIVEN DEVELOPMENT

Create applications that deliver business needs instantly through automation and by using prebuilt modules.

## MULTI-USER DEVELOPMENT

Multiple developers can work on application modules at the same time. BytePad easily synchronizes the work. Reduces conflicts in development and changes.

## AGILITY

Achieve agile workflow with module developments and businesses can quickly experiment with new ideas and iterate on existing applications.

## COLLABORATION

Supports the values shared by business professionals and the applications developed by IT department.

## NO RESTRICTIONS

Almost anything can be built with a low code application development platform since the modules can support any workflow, logic or data.
